

[Nov. 30 1810]

1

Minutes of 41452
Examination of the
King's Physicians
before the House of
Commons
Mr. Sheridan
Friday

Dr Reynolds
The same Questions as before
Council.
holds much as before with
alterations noted in his former examination
since between now & when last
his present disorder - to anxiety
for his Daughter

Whitbread - by whom Dr. Reynolds call'd in
Pericard - objects - question withdrawn
for the present.

who in attendance when Dr. R. was
call'd in.

Dr. R. Willis since
He was call'd in 6th november.

other assistants - Briant & 4 Persons provided
by him - no. two by Briant & two
by Willis. expunged.

1188

[Faint, illegible handwriting on a piece of paper pasted onto a larger sheet. The text is mirrored across the page, suggesting bleed-through from the reverse side.]

Thinks his past temperance
conducive to his recovery.

His memory entire his acuteness
entire his Discretion astute
& his judgement preserved.

- never saw a case paralleled to the King's
- his peculiar constitution & Malton

- Visages might remain as He
understood had been the case
on his former recoveries.

- not a Party to the declaration
of the King's recovery in all
his former cases

was a party - in 89 -
thought him quite well.

not 1800. he withdrew when
the Bulltins ceased - understood
the King had a relapse at them
but did not see him

[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]

41456

24

Dr Gibbon Dr J. L. R. Wilkie
attended him in that relapse.

- was a Party to the declaration ^{of frequency}
in 1804.

never heard of any relapse -
at that time

If fluished - any business
proposed composed him directly
so he was told by Heberden 2^d.

Two Questions of Whitbread's negative

Ponsoby - Question of the 12th age.

It must have some effect
tho' he does not present
appear to have suffer'd from age

in 1804. His Majesty had no
Defect of sight. has now
His being blind in some cases, benign
in others detrimental.

[Faint, illegible handwritten text on a rectangular piece of paper pasted onto a larger sheet.]

41457_8

The Eye sight necessary
to controul.

5

^{Journals} His relapse distressed them & made
them less sanguine of speedy recovery
but not of ultimate recovery.

advanced age would be ^{dis-}advantageous
in any other case.

No ^{particular cause for his malady} cause in 1788.

In 1801 he was informed that
He lost ^{his} sleep in consequence of
the accession of his Ministers
He afterwards caught cold

no ascertainable cause for his
malady in 1804.

The Royal Family have not
seen him -

The Lord Chancellor saw him
the Day before yesterday

11481

[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]

41458

6

The Chancellor had the Physicians
consecrated.

Some ^{of them} doubted whether
it would do good - but
the King wish'd it - and
they fear'd to irritate him
by refusing -

J^r H. H. was the Person who
told the King the C. was at
Windsor He was alone with
the King - not ^{discussing} know of it
till afterwards.

Thinking his seeing the C.
gave him more self Popularity
was not consulted by J^r H. H.
as to telling the King of the Chancellors
being there

He advised the C. to avoid discussion.

one Reason for the C. i seeing
the H. that Parol might
have other authority than the
Physicians . -

in - 88 beneficial consequences
arose from His Majesty, seeing
the Chancellor & Mr Pitt.

His bodily health - He has
at times had considerable accession
of Fever . -

He attaches considerable importance
to all accession of Fever . -

When He uses the word Fever
he means not mental disease
- but actual bodily Fever
tho it might also be accompanied
by increase of mental disorder

[Faint, illegible handwritten text, likely bleed-through from the reverse side of the page.]

41460

Perceval.

It it was not at
the suggestion of the C. that
He saw the thing but at the
Physicians -

Adm. No Person was present He
was introduced by J^r A. H.

When J^r Thurlow saw him in
- 88 J^r R. was himself present.
& when Mr Pitt saw him

He is now left sanguine
of his Majesty's speedy recovery

Can state no probable - Time
for his ultimate Recovery.

The Chancellor was with the thing
about 18 minutes.

~~The thing violent &c~~

[Faint, illegible handwritten text on a rectangular piece of paper pasted onto a larger sheet.]

41461-2

When they say the M. is better
they combine both the mental
& bodily disorder -

Dr Bailey

The ~~preliminary~~ ^{preliminary} questions put
& answered without much variation
as before

He does not think that of late
there has been much appearance
of improvement.

Whitbread

never visited the King
as a Patient before this illness.

The Lord C. I saw the M. the
Day before yesterday
it was at the suggestion of the
Physicians. that he might satisfy Parl!

Handwritten text, likely a letter or document, written in cursive script. The text is faint and mostly illegible due to fading and bleed-through from the reverse side. The document is folded horizontally. There are several small dark spots or stains on the paper, notably one in the upper left quadrant and another in the lower right quadrant. The paper is aged and yellowed.

Dr Ashenden first suggested it
 Mr H. H. told Mr M. the Day
 before that the C. was to be at Windsor
 it was thought better afterwards
 that he should not have been
 told so. - -

The things age certainly renders his
 recovery less probable

at the same age in a relation
 Term - the thing is at many
 People at C.

conceiving that Blindness at the
 commencement might be an advantage
 afterwards otherwise.

can form no satisfactory conjecture
 as to the duration of his illness

[Faint, illegible handwritten text, possibly a letter or document, with visible ink smudges and bleed-through.]

41463

He never knew but one
Person of his Majesty's ^{age} afflicted
but that Person was - & He did
not recover -

His left Languine near
of his speedy recovery than
He was

[Faint, illegible handwriting on a piece of paper pasted onto a larger sheet.]
